## **2. Nature of the RFP**

- (1) The RFP constitutes an invitation to Proponents describing the intent, purpose, requirements and concerns of the City and prescribes how Proponents are to respond to this RFP.
- (2) This RFP may contain a general description of the City's requirements, including location constraints, information on space requirements, performance requirements and other technical specifications, warranty and maintenance requirements and other factors that the City intends to take into account in the award of the Contract.
- (3) These Instructions to Proponents, the Proposal Submission Information and other RFP Documents explain how Proponents are to submit Proposals and address certain legal requirements and implications relating to the Proposal process and Contract and summarize how the Contract will be concluded.
- (4) Without limiting any other right or privilege of the City contained in the RFP, the following rules shall govern the evaluation of Proposals:
  - (a) The City may consider the full range of options, amenities and enhancement features offered by a Proponent when awarding the Contract. The City shall be the sole judge as to whether the added value offered in respect thereof justifies any additional expenditure. This RFP may be subject to possible cost constraints, which the City shall not be obliged to disclose to any Proponent, which may rule out the selection of a Proposal. While the City shall not be obligated to consider optional features, no optional features will be considered by the City unless the Proponent's submission fully complies with the RFP in all respects.
  - (b) The City reserves the right to award the Contract based solely upon considerations of Total Contract Price, or Total Contract Price with Options, or upon performance, technical, warranty, maintenance, compatibility and other considerations contained in section 22 (Reserved Privileges of the City) and section 24 (Record and Reputation), or any combination thereof, as the City considers it in its best interests to do so.
  - (c) Where compliance with any specified criteria is stated to be a condition precedent to the award of the Contract, that condition shall be deemed to be for the exclusive benefit of the City, which may elect to waive that condition in its absolute discretion, and the City shall not be liable to any person by reason of so doing.

- (d) Based upon the evaluation criteria set by the City, all compliant Proposals shall be evaluated, and a recommendation may be made to Council (or the designated person with authority delegated by Council to approve the recommendation for award) to award the Contract to the Proponent whose Proposal best satisfies the criteria that have been established by the City, but where the City for any reason in its sole discretion decides that all Proposals received were unsatisfactory, or that the terms and conditions set out in the RFP or an Addendum cannot be realized with that Proponent whose Proposal best satisfies the criteria that have been established by the City, then the City reserves the absolute right, as it sees fit,
  - (i) to revise and reissue the RFP;
  - (ii) to cancel the RFP,

And in no such case shall any person have any legal claim or recourse against the City and the City's representatives on any ground whatsoever. The exercise of a right by the City shall not preclude the exercise by the City of any other right.

- (e) The Proposals will be evaluated based on the criteria listed in this RFP and/or any Addendum or Addenda thereto. Unless a specific weighting is indicated in this RFP or any Addendum or Addenda thereto,
  - (i) The City may give such weighting to each of the identified criteria as the City considers appropriate; and
  - (ii) It is within the exclusive discretion of the City to determine which of the features specified by a Proponent and any other features specified in the RFP or any Addendum or Addenda thereto offers the City the best value for money.

Subject to the foregoing, the criteria for the evaluation of Proposals shall be as specified by the City from time to time, and the City shall be the sole authority to determine how those criteria are to be interpreted and applied, and the weighting to be given to each criterion, if any.

- (f) The Evaluation Team may include such members of the City's staff and outside Independent Consultants as the City considers is necessary or advisable to provide proper technical (including legal and financial) evaluation and analysis of the Proposals that have been made. Depending upon the background and expertise required, evaluators may not individually score every component. The Evaluation Team will meet as required to create a team score for each Proponent's Proposal. The Evaluation Team may modify the Evaluation Team's score to reflect additional information obtained during the clarification of Proposals or at any meetings or interviews scheduled with Proponents.

- (g) The City shall not be obliged to disclose the evaluation scores of any individual member of the Evaluation Team, nor to justify any score awarded by that team or any member thereof. In the absence of evidence of manifest bad faith, any evaluation carried out by the Evaluation Team shall be considered to be fair and accurate for all purposes and shall not be subject to review by any court or other tribunal.
- (5) The City wishes to fully understand each Proponent's Proposal. Therefore, each Proponent is encouraged to submit any additional material that it believes will facilitate the evaluation process, subject to any page quantity submission restrictions contained in this RFP. Furthermore the Proponent must make available to the City additional evaluation information as requested by the City.
- (6) At its election, the City may use the RFP process to identify a short-list of Proponents. Following an initial evaluation, the City may invite such number of the top-ranked Proponent(s) as it considers advisable, to present their concept to the Evaluation Team in a formal interview session. Performance in this interview may be taken into account in the evaluation process.

# **SPECIAL PROVISIONS**

## **1. AWARD OF CONTRACT**

Subject to the City's reserved rights and privileges set out in the Proposal, the Contract shall be awarded to the compliant Proponent who has:

- i) Met the Benchmark as set out in Table 1 – Criteria for the Evaluation of Proposals, and
- ii) With the lowest Total Contract Price in Step 2 Form of Proposal – Cost Proposal.

If there is a tie, then the following tie-breaking measure will be used to select the Successful Proponent.

- i. The Proposal with the highest overall points, and if still tied,
- ii. The Proposal with the highest points for Table 1 – Criteria for the Evaluation of Proposals, 4. Inspection Equipment to be Used.

## **2. TERM OF THE CONTRACT**

The term of the Contract shall be for a one-year period ("Term One") which will commence upon the City's notification of Contract award to the Successful Proponent.

The term of the Contract may be extended by the City for a maximum four additional, one-year terms ("Term Two", "Term Three", "Term Four", and "Term Five") at the sole discretion of the City.

There is no obligation on the City to extend the Contract. Should the City decide to extend the Contract, such extension shall be on the same terms and conditions of the original Contract(s) including price.

The estimated Term of the Contract dates shall be as follows:

Term One    August 1, 2015 to July 31, 2016

Optional renewals terms, if exercised, shall be as follows:

Term Five    August 1, 2019 to July 31, 2020

### **3. QUANTITIES**

The estimated quantities to be Supplied under the Contract are set out on the Form of Proposal – Cost Proposal – (Step 2) and shall be used as the basis for calculation upon which the award of the Contract will be made. The actual amount paid to the Successful Proponent will be the Unit Price multiplied by the actual quantities of such Goods and Services supplied during the course of the Contract.

The Successful Proponent shall have no claim for any compensation against the City of Hamilton if the Successful Proponent's actual quantities of services completed are above or below the estimated quantities provided in the Form of Proposal – Cost Proposal – (Step 2).

### **4. PRICES**

#### **4.1 UNIT PRICES**

Unit Prices shall be all inclusive, and shall include, without limitation: all labour, material, equipment, any service fees, transportation, delivery charges, expenses, allowances, charges and any taxes exclusive of Value Added Taxes.

Reference link listed: <http://www.statcan.gc.ca/tables-tableaux/sum-som/l01/cst01/cpis01g-eng.htm>. If this site discontinues publishing these statistics, the City will provide an alternate relevant link for the basis of an adjustment.

The Successful Proponent shall provide supporting documentation (a printout of the Consumer Prices Index) that clearly shows the increase in the Consumer Prices Index, and shall do so at least 90 days prior to the commencement of the renewal term option.

Any price increases require prior approval of the City.

Pricing for Terms Two, Three, Four and Five will be determined by applying the annual Consumer Price Index (CPI) differential for the 'all items' category for Ontario to the Unit Price stipulated in the Form of Proposal – Cost Proposal - Schedule of Quantities and Prices. The annual CPI differential shall be calculated based on the start and end date of the previous Term of the contract.

For example:

Term Two pricing = (CPI differential x Term One Unit Price) + Term One Unit Price

Where;       CPI = CPI for the 'all items' category for Ontario  
              X = CPI value on first month of Term One  
              Y = CPI value on the last month of Term One  
              CPI differential =  $(Y - X) / X$

# TERMS OF REFERENCE

The Successful Proponent shall:

- be capable of providing the deliverables, such as, but not limited to: data, pictures, videos, and reports as outlined in this RFP.
- supply all equipment, labour, materials, transportation, reports, and data exchange services necessary to complete surveys and prepare reports as specified in this RFP.

The major deliverables are a monthly maintenance needs report and a relational database containing all existing and new data in a format compatible with the City's existing Maintenance Management system (Hansen).

## 1. SCOPE OF WORK

Data collection for the entire sanitary, storm and combined sewer systems is required to assist in the formulation of a prioritized maintenance-management program for all sewers and manholes.

The zoom camera inspections of manholes and sewers are designed to provide the City with a comprehensive set of data to assist in the development of a City-wide sewer rehabilitation and maintenance plan.

This project will assist the City in updating and validating a matrix of the sewer pipe and manhole data and conditions utilizing a customized format based on NASSCO PACP version 6.0.1 and MACP version 6.0.1 inspection guidelines.

It involves the use of truck-mounted and off-road zoom video inspection technology and GPS to update and compile sewer inspection data for all manholes and sewer segments within the City.

There are approximately 43,750 municipally owned manholes within the City required to be accessed over a five year period between the months of April and December of each year, dependent on weather and temperature conditions.

This includes, but is not limited to:

- approximately 40,150 manholes located within the City's right-of-way and 5 metres of the traveled portion of road, and
- approximately 3,600 manholes located off the City's right-of-way requiring off-road travel and setup

There are over 47,000 sewer segments averaging 70.0 metres in length from manhole to manhole.

## **2. DESCRIPTION OF WORK**

The zoom camera must be lowered into each manhole allowing the recording of the structural and operational condition of the sewer pipes and manholes. The zoom camera will be remotely positioned to view and inspect all sewer pipes entering or exiting each manhole.

The manholes will be inspected by either a remote or internal method:

- i) Remote manhole inspections require the use of the zoom camera, located at the surface and immediately below the chimney, to identify and record defects.
- ii) Internal manhole inspections require the use of a wide angle lens camera, lowered from the surface to the manhole base, to identify and record defects.

The zoom camera system must permit the viewing of the condition of the manholes and the sewer pipes without person-entry.

Should special situations require person-entry, all confined space entry procedures required by the Occupational Health and Safety Act shall be strictly adhered to.

Work orders will be generated by the City and will be based upon existing sewer inventory information which indicates the type of sewer, diameter of pipe, direction of flows and existing manhole locations and Hansen identification numbers.

## **3. SCHEDULE AND LOCATION OF WORK**

The Successful Proponent will be required to segregate the Work into eight separate areas:

- Upper Stoney Creek
- Lower Stoney Creek
- Upper Hamilton
- Lower Hamilton
- Glanbrook
- Dundas
- Flamborough
- Ancaster

The schedule of Work shall be prepared by the Successful Proponent based on the sequential inspection of all eight areas.

The schedule of Work must be approved by the Project Manager prior to commencement of Work.

The schedule will be based on single shift operations.

It is expected that Work will be conducted during standard operating hours except when requested and authorized by the Project Manager otherwise.

The Project Manager will discuss Work progress and data collection schedules with the Successful Proponent prior to commencing Work.

Any significant problems which could delay the completion date of the scheduled Work shall be reported to the Project Manager in a timely manner.

The Work to be performed is typically of a seasonal nature and as such the City has limited the period of data collection from **April 1 to December 15** of each calendar year. However, at the mutual consent of the Project Manager and the Successful Proponent, the data collection period may be gathered year-round provided the Successful Proponent can obtain and submit high quality inspection results during cold temperatures and inclement weather.

It shall be at the sole discretion of the Project Manager that the Successful Proponent may collect field data from December 15 through to April 1 (off season) and allow inspections to proceed based on public safety, traffic protection and inspection quality. Should the Successful Proponent choose to collect data from December 15 to April 1, there will be no additional payment or adjustment for any delay to the Successful Proponent caused by inclement weather or heavy snow fall or ice during off season. Any additional costs incurred by the Successful Proponent will be considered to be included in the Unit Prices Bid for the Work and no additional compensation will be allowed.

The Successful Proponent shall have one complete inspection crew available during the term of the Contract and/or be able to re-direct a complete inspection crew to respond to occasional same Business Day calls and occasional night shift Work at the Project Manager's request.

#### **4. QUALIFICATIONS / EXPERIENCE**

The Successful Proponent's project lead responsible for the Project, and the senior technician assigned to the data gathering, must have related experience in manhole and sewer inspections using a zoom camera.

The technicians responsible for the data preparation must have experience in this field.

Please note that key personnel proposed for the Project shall not be removed or replaced without obtaining the City's written consent at least 30 days in advance. If any named key personnel are to be replaced for any reason, the Successful Proponent shall promptly assign an acceptable, equally qualified replacement. Failure to do so may result in the termination of the Contract. The City shall have the right to interview and approve any replacement of key personnel.

## **5. (ZOOM CAMERA) MATERIALS AND EQUIPMENT**

The zoom camera equipment, computer, video recording equipment and ancillary supplies necessary to complete zoom camera inspections must be transported in a mobile light duty vehicle. This vehicle shall be of an appropriate size and weight to allow for the inspection of manholes located on City streets within close proximity. Additionally, the Successful Proponent shall make further provisions to perform off-road inspections in, but not limited to, recreational trails, sidewalks, and green spaces.

All inspections performed off-road using mobile and/or portable set-ups must be of the same video quality as those performed from the truck mounted system.

### **5.1 Zoom Camera**

The inspection and evaluation of the sewer systems must be performed using a waterproof, pan and tilt colour camera, capable of entering into a minimum manhole cover size of 300 millimetres (12 inches). The zoom camera must be equipped with a remote controlled and integrated lighting system capable of providing a clear image of the interior of the sewer pipe for a distance varying between 15m and 30 metres (50 - 100 feet) for small diameter pipe such as 200 millimetres to 250 millimetres (8 -10 inches), and 30 metres to 100 metres (100 – 300 feet) in larger diameter pipe. Controlled from inside the mobile unit, the numerous individual adjustable light sources must be compatible with the lens angle and dispersed in a manner such that shadows are eliminated and "hot spots" are illuminated.

The camera shall be equipped with an optic telephoto lens with sufficient magnification that the farthest image is not degraded by the effects of pixelization. The camera will be capable of focusing in on objects to a minimum of 150 millimetres (6 inches) from the camera lens. The camera pan and tilt feature shall be capable of inspecting 360 degrees of a pipe, manhole or junction (pipe circumference), for pipes from 200 millimetres (8 inches) to 2000 millimetres (78 inches) diameter, without raising or lowering the boom.

The camera must be detachable from the mobile unit for inspection of difficult locations using a tripod. The equipment must be capable of lowering the camera to a depth of at least 12 metres (39 feet) inside the manhole.

## **5.2 Wide Angle Lens Manhole Inspection Camera**

For detailed manhole inspections required under this Contract, the inspection and evaluation of the sewer manholes must be performed using a waterproof, wide angle lens, colour camera capable of entering into a minimum manhole cover size of 300 millimetres (12 inches). The camera must be equipped with a compatible remote controlled, integrated lighting system capable of clearly illuminating the interior of a manhole.

## **6. INSPECTION REQUIREMENTS**

### **6.1 Pre and Post Inspection**

Prior to the initiation of the sewer and/or manhole inspections and at the conclusion of the inspection, the Successful Proponent shall:

- locate manhole
- establish proper pedestrian and traffic protection controls
- test the atmosphere for Lower Explosive Limits (LEL) of the confined space before opening manhole access cover
- perform confined space entry as required to prepare manhole for inspection and restore the manhole to original conditions at the conclusion of the inspection
- Obtain GPS coordinates where required
- re-seat manhole cover and clean the site at the conclusion of the inspection

### **6.2 Zoom Camera Sewer Inspection**

The camera shall be lowered into the manhole, and must be capable of descending to a depth of 10 metres – 12 metres (33 – 39 feet) inside the manhole. The camera must remain stable at any extended position to ensure a clear and stable video image is produced.

The camera shall be lowered into the manhole and each sewer segment entering or exiting from the manhole shall be inspected sequentially. The sewer inspection videos must include a header screen that shall be clearly displayed for a minimum of 5 seconds at the beginning of all video inspection recordings. Inspection of a sewer pipe shall not proceed while the header information screen is being displayed. For each sewer pipe, the mandatory PACP header fields to be completed are: 1, 1a, 10, 10a, 12, 13, 16, 17, 21, 23, 24, 25, 26, 39. These fields are defined in the Pipeline Assessment Certification Program Version 6.0.1. Only the applicable field of 13 or 17 should be completed, based on whether the current set-up is on the upstream or downstream MH for the sewer segment. This is to be a measured depth from the MH rim to the invert of the sewer being inspected.

The camera shall inspect the entire circumference of the sewer to manhole connection. The rest of the sewer must then be inspected to the maximum distance possible given the constraints of the diameter and material of the pipe, pipe alignment and service conditions. For each structural and service anomaly detected, the operator shall precisely focus on the defect and record a steady image for a period of 5 to 10 seconds. All defects identified and captured on video shall also be recorded in the data fields and format consistent with PACP 6.0.1.

### **6.3 Internal Manhole Inspection**

Use the appropriate data collection software to capture and record information pertaining to the manhole in the provided format below, which is essentially a Modified Level 1 MACP 6.0.1 Inspection with the addition of Manhole Component Defects. The use of the identified data fields shall be in a format consistent with MACP.

The inspection will be conducted utilizing a wide angle lens inspection camera. The inspection will be initiated from the surface and will progress to the base of the manhole or to the full extent of the equipment. Prior to the camera entering the MH, a horizontal surface scan is to be recorded on the video to confirm location of the MH above grade.

The manhole inspection video must include a header screen that shall be clearly displayed for a minimum of 5 seconds at the beginning of all video inspection recordings. Inspection of the manhole shall not proceed while the information screen is being displayed. For each sewer manhole, the mandatory MACP header fields to be completed are: 1, 2, 8, 9, 10, 11, 13, 14, 16, 20, 25, 26, 27, 28, 31, 32, 33, 34, 35, 36, 37. These fields are defined in the Manhole Assessment Certification Program – Version 6.0.1.

Where software requires fields to be populated as part of MACP restrictions, yet are not listed above as required as part of this Contract, 'X's' may be entered as placeholder in this field.

The camera will be lowered down the manhole at a rate not exceeding 1 meter per 20 seconds. The camera will inspect the entire 360 degrees of manhole surface. For each structural and service anomaly detected, the operator will precisely focus on the defect and record a steady image for a period of 5 to 10 seconds. Each sewer connection into or out of the manhole will be inspected.

Once the camera has traversed the entire manhole depth it shall be raised to mid-height where the inspection of the manhole benching and trough will be completed

The required data fields to be populated in the MANHOLE COMPONENT OBSERVATION FORM are: 40, 41, 43, 44, 49, 50, 51, 54, 55, 57, 62, 64, 73, 78, 82, 83, 85. These fields are defined in the Manhole Assessment Certification Program - Version 6.0.1. Where software requires fields to be populated as part of MACP restrictions, yet are not listed above as required as part of this Contract, 'X's' may be entered in this field.

Given that all sewer connections will have a full zoom inspection completed on them, we **do not** require that the MANHOLE PIPE CONNECTION FORM be completed as part of the manhole inspection.

All manhole components must be inspected, captured on video and shall be recorded in the MANHOLE COMPONENT DEFECT FORM in a format consistent with MACP 6.0.1.

## **7. CODING AND DATABASE EXPORTING TO HANSEN**

The City intends to import the data collected from this project into their Hansen Maintenance Management system. The collection of data must therefore satisfy the requirements provided herein.

Defect and Service Codes - The defect and service codes employed for this Contract will be as per NASSCO PACP and MACP version 6.0.1

Database Content - All data collected shall be provided in Microsoft Access 97 digital format or in a format readily importable into Microsoft Access97 without the necessity for any intermediate conversions, manipulations or formatting.

All required information for sewer pipe zoom inspections shall be delivered in a standard PACP 6.0.1. database format.

All required information for manhole inspections shall be delivered in a database format consistent with the forms in MACP 6.0.1. As data is collected in each area, it is anticipated that the Successful Proponent will be continuously identifying deficiencies that require immediate maintenance.

The Successful Proponent shall prepare and update an emergency repair report that lists the assets requiring emergency maintenance to restore the asset to a service level where no operational defects are present. This report will be updated by the Successful Proponent on a weekly basis and provided to the Project Manager in Excel format. The report will contain a running total, where each week's emergency repair requirements will be added to the previous week's report. The City will continuously review these reports and will initiate Work based on the recommendations provided.

Presented in Appendix A – Sample Weekly Priority Flushing / Cleaning Report is a sample emergency repair report to illustrate the minimum information to be provided in these reports.

Along with the submission of the emergency repair reports, any defects the Successful Proponent identifies that represent a loss of sewer service, for example, an existing sewer blockage, or will imminently result in a loss of sewer service, for example a sewer with 80% blockage, or any other observed conditions that place the health of the Successful Proponent's workers or the general public at risk, for example a broken manhole lid, must be reported to the Project Manager **immediately**.

## **9. SAFETY PRECAUTIONS**

The Successful Proponent shall adhere to all applicable provincial and municipal regulations, standards, and operating procedures for this type of Work while employed by the City. This will include but not be limited to verification of the presence of any explosive or hazardous gases in the manhole before the manhole lid is removed, and continuously throughout the duration of the inspection.
